

DR. EZER KANG

"I STILL NEED TO MANUALLY REFORMAT THE DATA AND CREATE A DATA DICTIONARY. IF THERE'S SOMETHING THAT CAN HELP US DO THAT AUTOMATICALLY, THAT WOULD BE AMAZING."

PERSONA SNAPSHOT

Name: Dr. Ezer Kang
Age: 40-55
Gender: Male
Location: United States of America
Occupation: Affiliate Professor & Medical Researcher
Work Environment: Department of Psychology, Howard University

MAJOR RESPONSIBILITIES

- Design and conduct medical and public health research studies.
- Work with research partners in different countries and communities.
- Collect and analyze quantitative and qualitative research data.
- Select or develop questionnaires and other research instruments.
- Adapt research instruments for different languages and cultures.
- Analyze data using tools such as SPSS and R.
- Publish research findings and manage research projects.
- Make sure participant data is protected and anonymized.

BEHAVIORS/ ATTITUDE

- Prefers digital data collection because it reduces missing data and avoids paper records.
- Values data quality and checks whether research instruments are reliable before using the results.
- Believes research tools should be localized, not simply standardized across countries.
- Works closely with trusted local partners who understand the community, language, and culture.
- Values privacy and keeps identifying information separate from research data.
- Wants technology to reduce repetitive work without removing important human and cultural judgment.

MOTIVATION

He wants to conduct research across different populations while making sure the data accurately reflects each community's language, culture, and experiences. She also wants to reduce the amount of repetitive data preparation so researchers can spend more time answering important medical and public health questions.

GOALS & TASKS

- COLLECT RELIABLE RESEARCH DATA FROM DIFFERENT POPULATIONS AND COUNTRIES.
- USE DIGITAL TOOLS SUCH AS KOBO TOOLBOX TO COLLECT QUANTITATIVE DATA EFFICIENTLY.
- ADAPT QUESTIONNAIRES SO THEY MAKE SENSE IN THE LOCAL LANGUAGE AND CULTURE.
- TRANSLATE AND BACK-TRANSLATE RESEARCH INSTRUMENTS WHILE PRESERVING THEIR MEANING.

PAIN POINTS

- Adapting research instruments to different cultures and languages takes significant time.
- Direct translation is often not enough because words, response choices, and concepts may have different meanings across cultures.
- Common scales, such as 1-to-5 Likert scales, may be difficult for participants in some settings to understand.
- Researchers must spend time checking whether translated questionnaires still measure the same concept correctly.
- Excel exports from data collection tools often require manual reformatting before they can be analyzed in SPSS or R.
- Creating data dictionaries and assigning meaningful variable names can be repetitive and time-consuming.
- Qualitative interview analysis requires researchers and students to manually read transcripts and identify codes and themes.

HOW OUR PLATFORM HELPS

She can discover standardized datasets, understand their origin, request approved access, and analyze them inside a secure research environment.

DR. AMINA KAMAU

"WE ALREADY COLLECT VALUABLE INFORMATION EVERYDAY. I NEED A WAY TO MAKE IT USEFUL WITHOUT SPENDING HOURS CLEANING IT MYSELF."

PERSONA SNAPSHOT

Name: Dr. Amina Kamau

Age: 36

Gender: Female

Location: Kenya

Occupation: Physician & Clinical Research Coordinator

Work Environment: Regional hospital in Kenya

MAJOR RESPONSIBILITIES

- Treat patients while supporting clinical studies.
- Record patient and study information.
- Collect research data for government, university, and nonprofit-funded projects.
- Coordinate with nurses, laboratories, and outside researchers.
- Make sure collected information is medically correct.

BEHAVIORS/ ATTITUDE

- Very comfortable with medicine but not necessarily advanced data engineering.
- Prioritizes patient care over additional administrative work.
- Wants technology to simplify work rather than create another task.
- Cares strongly about patient privacy.
- Wants local researchers to remain involved after data is shared.

MOTIVATION

- She wants the information collected from her patients to contribute to discoveries to save lives rather than sit unused in spreadsheets.

GOALS & TASKS

- RECORD CLINICAL DATA WITHOUT ADDING A LARGE ADMINISTRATIVE BURDEN.
- UPLOAD RESEARCH DATA IN THE FORMAT SHE ALREADY USES.
- MAKE DATA UNDERSTANDABLE TO RESEARCHERS IN OTHER COUNTRIES.
- CORRECT ERRORS OR MISSING INFORMATION BEFORE DATA IS SHARED.
- RECEIVE RECOGNITION FOR HER INSTITUTION'S CONTRIBUTION TO RESEARCH.

PAIN POINTS

- Data is collected in spreadsheets, paper forms, notes, and different systems.
- Different researchers use different terminology and abbreviations.
- She has little time to manually clean datasets.
- International researchers may misunderstand local terminology or context.
- Valuable data may never be used because it is difficult to organize.

HOW OUR PLATFORM HELPS

She uploads existing clinical data, and the platform helps organize, standardize, protect, and prepare it for approved research.

MARCUS LEE

"I NEED TO KNOW THAT THE DATA IS RELIABLE, SECURE, AND READY TO ANALYZE BEFORE MY TEAM BUILDS RESEARCH DECISIONS AROUND IT."

PERSONA SNAPSHOT

Name: Marcus Lee

Age: 39

Gender: Male

Location: United States of America

Occupation: Clinical Data Science Manager

Work Environment: Pharmaceutical company in the United States

MAJOR RESPONSIBILITIES

- Support drug and clinical research with patient data.
- Identify patient populations relevant to studies.
- Evaluate real-world health evidence.
- Work with scientists, physicians, and regulatory teams.
- Assess whether external datasets are reliable enough for research.

BEHAVIORS/ ATTITUDE

- External datasets can require extensive cleaning.
- Data collected by different hospitals is difficult to combine.
- Terminology and measurement differences create uncertainty.
- Obtaining data through individual institutions takes time.
- Privacy and regulatory concerns make health-data access complicated.
- Poor documentation can make datasets unsuitable for serious research.

MOTIVATION

Faster access to reliable and diverse data can reduce research delays and help teams understand whether treatments work across different populations.

GOALS & TASKS

- ACCESS HIGH-QUALITY DATA FROM MORE DIVERSE PATIENT POPULATIONS.
- FIND INFORMATION ABOUT DISEASES THAT MAY BE MORE PREVALENT IN CERTAIN REGIONS.
- IDENTIFY POTENTIAL RESEARCH COHORTS.
- COMPARE OUTCOMES ACROSS POPULATIONS.
- OBTAIN STANDARDIZED DATA QUICKLY.
- VERIFY WHERE DATA ORIGINATED AND HOW IT WAS PROCESSED.

PAIN POINTS

- External datasets can require extensive cleaning.
- Data collected by different hospitals is difficult to combine.
- Terminology and measurement differences create uncertainty.
- Obtaining data through individual institutions takes time.
- Privacy and regulatory concerns make health-data access complicated.
- Poor documentation can make datasets unsuitable for serious research.

HOW OUR PLATFORM HELPS

The company gains controlled access to standardized international datasets, data-quality information, and secure research tools without directly managing dozens of separate data-cleaning processes.

To be updated after real person interview

BAYOWA O

"WE COLLECT PATIENT INFORMATION AND HISTORY DAILY. I NEED A WAY TO MAKE IT DIGITALLY ACCESSIBLE AND INTEGRATE OLD PATIENT INTO THE SAME DIGITAL DATABASE."

PERSONA SNAPSHOT

Name: Bayowa O., MS

Age: 35

Gender: Male

Location: Nigeria

Occupation: Health and Data Professional

MAJOR RESPONSIBILITIES

- Manage hospital staff, emergency room, inpatient and outpatient services.
- Diagnose and manage patients.
- Record patient information.
- Collect data for in-hospital surveys.
- Coordinate with nurses, laboratories.
- Refer patient to collaborating hospital if needed.
- Make sure collected information is medically accurate.

BEHAVIORS/ ATTITUDE

- Comfortable with medicine, data tools but not necessarily advanced data engineering.
- Prioritizes patient care over additional administrative work.
- Wants technology to simplify work rather than create another task.
- Cares strongly about patient privacy.
- Wants a secure local database for patient data with secure backup.

MOTIVATION

Information collected from patients could improve the process of history taking, rapid response, diagnostics and management into an efficient system that saves patients' lives rather than sit unused in folders and spreadsheets.

GOALS & TASKS

- RECORD CLINICAL DATA WHILE LIMITING ADMINISTRATIVE BURDEN.
- MAKE DATA ACCESSIBLE AND USABLE FOR CREATING REPORTS AND DOCUMENTS UNDERSTANDABLE TO HOSPITAL BOARD AND GOVERNMENT HEALTH OFFICIALS.
- CORRECT ERRORS OR MISSING INFORMATION BEFORE DATA IS SHARED.

PAIN POINTS

- Data is collected in spreadsheets, paper, forms, notes, and file systems.
- Different doctors use different terminology and abbreviations.
- There is minimal time to manually clean up patient information/data and collate into dataset.
- Valuable data may never be used because it is difficult to organize.

HOW OUR PLATFORM HELPS

Uploads existing clinical data, and the platform helps organize, standardize, protect, and prepare it for hospital board approval.

DANIEL OKORO

"RESEARCHERS SHOULD BE ABLE TO LEARN FROM OUR HEALTH DATA, BUT WE MUST ALWAYS KNOW WHO IS USING IT, WHY THEY ARE USING IT, AND HOW OUR PEOPLE BENEFIT."

PERSONA SNAPSHOT

Name: Daniel Okoro

Age: 45

Gender: Male

Location: United States of America

Occupation: National Health Data & Research

Work Environment: National Institute of Health

MAJOR RESPONSIBILITIES

- Oversee national or regional health-data programs.
- Support disease surveillance and public-health research.
- Review requests for health-data access.
- Coordinate with hospitals, universities, NGOs, and international organizations.
- Protect patient privacy and national health information.

BEHAVIORS/ ATTITUDE

- More cautious about data sharing than most researchers.
- Values security, transparency, and accountability.
- Wants clear access rules.
- Supports research when benefits to the population are clear.
- Prefers long-term institutional agreements rather than informal data exchanges.

MOTIVATION

He wants health data to support better policy and research while ensuring that patients and contributing institutions remain protected.

GOALS & TASKS

- UNDERSTAND DISEASE PATTERNS ACROSS REGIONS.
- COMBINE DATA FROM HOSPITALS USING DIFFERENT SYSTEMS.
- SUPPORT TRUSTWORTHY PUBLIC-HEALTH RESEARCH.
- GIVE APPROVED RESEARCHERS ACCESS WITHOUT LOSING CONTROL OF SENSITIVE INFORMATION.
- TRACK WHO ACCESSES DATA AND WHY.
- BUILD STRONGER INTERNATIONAL RESEARCH PARTNERSHIPS.

PAIN POINTS

- Hospitals may use incompatible data systems.
- National datasets may be incomplete or difficult to combine.
- Sharing sensitive health information creates privacy and legal concerns.
- Government agencies may lack technical infrastructure for research access.
- Researchers frequently request data in different formats.
- There is concern about losing control over how national health data is used.

HOW OUR PLATFORM HELPS

The Trusted Research Environment gives the agency controlled access, approval processes, privacy safeguards, and records of how data is being used.
